Alireza Habibollahi

Front-End Engineer

About Me

Frontend Engineer with 5+ years of experience developing scalable, high-performance web applications and enterprise software using React, Next.js, TypeScript, and modern frontend technologies. Experienced in building ERP systems, admin dashboards, customer-facing applications, and reusable design systems with a strong focus on performance, accessibility, maintainability, and user experience.
Skilled in designing component-driven architectures, developing complex business modules including Financial Accounting, Office Automation, Inventory Management, Treasury, Receivables, and Enterprise Workflows, while implementing real-time features using SignalR.
Strong experience collaborating with cross-functional teams, leading code reviews, mentoring developers, and delivering production-ready solutions for enterprise platforms. Passionate about building clean, scalable, and maintainable frontend architectures while continuously improving developer experience and product quality.

Skills

JavaScript Ecosystem
JavaScript (ES6+) · TypeScript · React.js · Next.js · React Native · Vue.Js

Core Technologies
HTML · CSS · Sass · Tailwind CSS · Ant Design · MUI · Headless UI

Frontend Architecture
Component-Driven Architecture · Enterprise Applications · ERP Systems · SSR · SSG · ISR · Performance Optimization

State Management
Redux · Redux Toolkit · Zustand · Context API

Forms & Validation
React Hook Form · Formik · Yup · Zod

Data Fetching & API Integration
Axios · React Query (TanStack Query) · SWR · Socket.io · SignalR · orval

Data Visualization
ApexCharts · Recharts

Flow & Diagrams
React Flow · GoJS

Maps & Location
Mapbox · React Leaflet · neshan

UI Tools & Enhancements
Framer Motion · ShadCN UI · i18next

Mobile & PWA
PWA · Capacitor.js

Testing
Jest · Unit Testing · Component Testing · Testable Code · React Testing Library

Build & Code Quality
Vite · Webpack · ESLint · Prettier

Prettier
Git · GitLab

Build & Code Quality
Vite · Webpack · ESLint · Prettier

Design Systems
Storybook · Design Systems

Web Performance
Lighthouse · Code Splitting · Lazy Loading · Bundle Optimization

Core Competencies

Frontend Architecture · Enterprise ERP Development · Component-Driven Architecture · Technical Decision-Making
Product-Oriented Development · Technical Planning · Complex Business Workflows · Performance Optimization
Real-Time Applications · Testing & Code Quality · REST API Integration · Code Review & Mentoring

Familiar With

Backend & Databases
Node.js · NestJS · Express Js · SQL · MongoDB

Programming
Python

Experience

Jan 2026 - Present · Iran, Tehran
Front-End Developer • Full-time
BehinehSazan

- Develop and maintain enterprise-scale ERP applications using React, and TypeScript.
- Design and implement reusable, component-driven UI architecture to improve consistency, scalability, and maintainability across the platform.
- Develop business-critical ERP modules including Financial Accounting, Office Automation, Quotations, Sales Invoicing, Inventory Management, Treasury, Accounts Receivable, and Document Management.
- Integrate backend services using Orval-generated API clients, Axios, and TanStack Query to deliver type-safe, maintainable, and efficient data fetching.
- Implement real-time application features using SignalR for live data synchronization and collaborative workflows.
- Collaborate closely with backend engineers, product managers, and UI/UX designers to deliver enterprise-grade business solutions.
- Participate in code reviews, architectural discussions, and frontend best practices to continuously improve code quality and developer experience.
- Contribute to product and technical decision-making by evaluating implementation approaches, system constraints, maintainability, and user requirements.
- Collaborate with product managers, backend engineers, and UI/UX designers to analyze requirements, define technical solutions, and make implementation decisions for complex ERP features.
- Participate in frontend architectural and technical decision-making, including component design, technology selection, API integration strategies, performance considerations, and long-term maintainability.
- Apply frontend testing practices using Jest for critical components and business logic to improve code reliability and reduce regressions.

Mar 2025 - Nov 2025 · Iran, Ahvaz
Front-End Developer • Part-time
Maroon Moshaver Arjan

- Designed and developed a visual workflow automation platform using GoJS, providing an intuitive drag-and-drop interface for modeling complex business processes.
- Built a customizable workflow engine with reusable nodes, configurable ports, dynamic connections, validation rules, and interactive editing capabilities.
- Implemented advanced editor features including grouping, copy/paste, undo/redo, keyboard shortcuts, context menus, zooming, panning, and JSON import/export.
- Developed reusable UI components and responsive interfaces using React, Tailwind CSS, and Material UI to improve development consistency and maintainability.
- Collaborated with backend engineers to integrate workflow definitions, synchronize business logic, and deliver enterprise-grade workflow management solutions.

Feb 2023 - Jan 2026 · Iran, Tehran
Front-End Developer • Full-time
VistaApp

- Developed and maintained scalable web applications, enterprise dashboards, and customer-facing platforms using React, Next.js, and TypeScript.
- Built reusable, component-driven frontend architectures and shared UI libraries to improve development efficiency, consistency, and long-term maintainability.
- Developed responsive, accessible, and high-performance user interfaces with a strong focus on user experience and modern frontend best practices.
- Integrated REST APIs and third-party services using Axios and TanStack Query, ensuring efficient data fetching, caching, and synchronization.
- Implemented complex business workflows including booking systems, administration panels, analytics dashboards, and offline-first applications.
- Mentored junior frontend developers, conducted code reviews, and maintained high engineering standards across the frontend team.
- Collaborated closely with backend engineers, designers, and product managers throughout the complete software development lifecycle.
- Apply frontend testing practices using Jest for critical components and business logic to improve code reliability and reduce regressions.

Jan 2022 - Feb 2023 · Iran, Tehran
Front-End Developer
Freelancer

Design and implementation of admin panel front-ends for internal organizations, emphasizing the creation of responsive user interfaces, enhancing user experience, and integration with backend systems.

Education

2024 - Present · Iran, Tehran
Artificial Intelligence
Master's degree, at IAU South Tehran

2019 - 2023 · Iran, Tehran
Electrical Engineering
Bachelor's degree, at IAU Science and Research

Project Overview

Mostazafan Foundation

Role: Frontend Developer
Stack: React, Redux, React Query, ant Design, SignalR

Key Features:
- Developed multiple modules for a large-scale employee welfare platform serving enterprise users.
- Built features for Hotel Reservation, Accommodation Management, Hotel Services, Shopping Cart, and Employee Dashboard (Kartabl).
- Developed responsive, user-friendly interfaces for complex business workflows while ensuring performance, usability, and maintainability.

ABFA Management Platform

Role: Frontend Developer
Stack: React , TypeScript , MUI , ApexCharts , GoJS , Axios , React Query

Key Features:
- Developed enterprise administration panels for managing water and wastewater services.
- Engineered a visual workflow designer similar to n8n, enabling users to create, configure, validate, and execute business workflows through an interactive drag-and-drop interface.
- Designed and implemented a customizable workflow engine with reusable nodes, ports, dynamic connections, and configurable business rules.
- Developed advanced graph editing capabilities, including drag-and-drop, grouping, copy/paste, undo/redo, keyboard shortcuts, context menus, zooming, and panning.
- Implemented node property editors, workflow validation rules, and business logic to support complex workflow configuration.
- Built JSON-based workflow serialization/deserialization for saving, loading, importing, and exporting workflow definitions.
- Developed reusable diagram components and graph utilities to support scalable feature development across the platform.
- Built operational dashboards and analytics using ApexCharts to visualize enterprise data and business metrics.
- Collaborated with backend engineers to integrate workflow execution APIs and synchronize workflow state with backend services.

Attendance Tracking SPA

Role: Frontend Developer
Stack: React, Redux, React Query, IndexedDB, QR Code Reader

A single-page offline-first application for managing student attendance with QR-based entry tracking.

Key Features:
- Developed an offline-first attendance management application with QR code-based student check-in.
- Implemented local data persistence using IndexedDB with automatic background synchronization.
- Enabled seamless offline functionality while maintaining data consistency after reconnection.

Parand Super App (SPA)

Modules: Food Ordering, Supermarket, Home Services
Stack: React, Redux Toolkit, React Router, Tailwind CSS, Zod, react-hook-form, Moment.js, ApexCharts

A modular super app offering multiple services in one unified SPA.

Highlights:
- Developed a modular super application combining multiple services into a unified user experience.
- Implemented restaurant ordering, supermarket shopping, and home service booking workflows.
- Built reusable UI components and centralized state management to improve scalability and maintainability.
- Designed responsive interfaces optimized for both desktop and mobile devices.

Tour Reservation Platform

Role: Frontend Developer
Stack: React, Redux Toolkit, Zod, react-hook-form, Axios

A tour booking platform enabling end-to-end reservations, hotel booking, vehicle rental and service ticketing.

Key Features:
- Developed a complete reservation workflow for tours, hotels, vehicle rentals, and travel services.
- Implemented multi-step booking flows, real-time capacity validation, and refund request management.
- Built responsive interfaces optimized for mobile-first booking experiences.

Custom Components & Tools

Reusable components developed for internal projects and admin dashboards:

- Headless Calendar & Dual Calendar: Fully customizable date pickers
- Gantt Charts (Month/Week View): Built with ApexCharts
- Form Builder (Drag & Drop): Dynamic forms using React DnD & Zod
- Rich Text Editor: Custom Slate.js WYSIWYG editor
- Interactive Whiteboard: Real-time collaborative canvas using React-Konva & WebSocket

Admin Panel & CMS Toolkit

Built reusable admin interfaces for multi-purpose dashboards:

- User & Role Management: Full CRUD + RBAC
- CMS: Rich text editing, media uploads, versioning
- E-commerce Module: Product & order management
- Analytics Dashboard: Interactive data visualization with filters
