Alireza Habibollahi

Frontend Engineer

About Me

Senior Frontend Engineer with **5+ years of experience** building **scalable enterprise applications** with **React**, **Next.js**, and **TypeScript.** Experienced in **frontend architecture**, **design systems**, **performance optimization**, and **complex business applications**. Strong background in **technical decision-making**, **code reviews**, **mentoring**, and **cross-functional product development**.

Skills

JavaScript (ES6+) | TypeScript | React.js | Next.js | React Native | Vue.Js

Redux Toolkit | Zustand | TanStack Query | React Hook Form | Zod

Component-Driven Architecture | Design Systems | SSR | SSG | ISR | Jest | React Testing Library

SignalR | WebSockets | Git | Vite | Webpack | Node.js | NestJS | Express.js | SQL | MongoDB

Experience

Jan 2026 - Present — Iran, Tehran

Front-End Developer • Full-time

BehinehSazan

- Develop and maintain a large-scale **enterprise ERP platform** using **React**, **TypeScript**, **Zustand**, **TanStack Query**, and **Ant Design**, supporting complex business workflows across financial and operational domains.
- Build and maintain ERP modules including **Financial Accounting**, **Billing**, **Sales Invoicing**, **Inventory Management**, **Treasury**, **Accounts Receivable**, **Office Automation**, **Quotations**, and **Document Management**, with a focus on scalability and maintainability.
- Design and evolve a component-driven frontend architecture and **reusable design system**, improving consistency, development speed, and maintainability across multiple ERP modules.
- Architect the frontend data layer using **Orval-generated API clients**, **Axios**, TanStack Query, SWR, and Zod, **enabling type-safe API** integration, caching, validation, and predictable server-state management.
- Implement real-time application features with **SignalR**, supporting live data synchronization and real-time updates across business-critical workflows.
- Improve application performance through **code splitting**, **lazy loading**, **bundle optimization**, and **frontend performance optimization**, reducing unnecessary loading and improving responsiveness across large ERP modules.
- Build enterprise dashboards and data-heavy interfaces using **ApexCharts**, while supporting multilingual product requirements with **i18next**.
- Contribute to frontend architecture and technical decision-making, including component design, state-management strategies, API integration patterns, performance considerations, and long-term maintainability.
- Participate in **code reviews** and **mentoring, helping establish frontend development** standards and improve code quality across the team.
- Maintain a reliable development workflow using **Vite**, **Git**, **Azure**, **ESLint**, and **Prettier**, supporting consistent development, collaboration, and delivery practices.

Mar 2025 - Nov 2025 — Iran, Ahvaz

Front-End Developer • Part-time

Maroon Moshaver Arjan

- Designed and developed a visual workflow automation platform using React, TypeScript, and **GoJS**, enabling users to model and manage complex business processes through an interactive **drag-and-drop interface**.
- Built a customizable **workflow engine** with reusable nodes, configurable ports, dynamic connections, validation rules, and extensible business logic for complex enterprise workflows.
- Implemented advanced graph-editing capabilities including drag-and-drop, **grouping**, **copy/paste**, **undo/redo**, keyboard shortcuts, context menus, zooming, panning, and JSON import/export.
- Developed reusable, responsive UI components using **Material UI**, **React Hook Form**, and Zod, with a focus on maintainability, validation, and consistent user experience.
- Used **Redux Toolkit** for application state management and React Flow alongside GoJS for interactive diagram and flow-based interfaces.
- Built data-heavy dashboards and visualizations using **ApexCharts** and **Recharts**, supporting operational and workflow-related analytics.
- Created reusable UI patterns and documented components with Storybook, improving consistency and collaboration across frontend development.
- Enhanced complex user interactions and interface transitions using **Framer Motion**, while maintaining usability across highly interactive workflow screens.
- Collaborated with backend engineers to integrate workflow definitions, **synchronize business logic**, and deliver **scalable enterprise workflow solutions**.

Feb 2023 - Jan 2026 — Iran, Tehran

Front-End Developer • Full-time

VistaApp

- **Led a frontend team**, owning **technical planning**, **architecture decisions**, **pull request reviews**, code quality standards, and **technical discussions** across multiple products and client projects.
- Acted as the primary frontend technical owner, **making decisions** around frontend architecture, state management, API integration, performance, reusable component design, and **long-term maintainability**.
- Built and maintained **scalable applications** using **React**, **Next**.js, **TypeScript**, **Redux** Toolkit, **Zustand**, Context API, TanStack Query, **SWR**, and Axios, supporting both customer-facing products and complex enterprise dashboards.
- Contributed as a **Full-Stack Developer** on selected projects, developing backend services with **Node.js**, **NestJS**, **Express.js**, working with **SQL** and **MongoDB**, and integrating frontend applications with **REST APIs** and **real-time services.**
- Designed **reusable UI systems** and application interfaces using **Tailwind CSS**, **ShadCN UI**, **Headless UI**, helping standardize frontend development across multiple projects.
- Built complex forms and validation workflows using **React Hook Form**, Zod, and **Yup**, supporting multi-step business processes, booking flows, administrative systems, and data-heavy applications.
- Developed PWA and offline-first applications, including local data persistence, synchronization strategies, and mobile-oriented experiences using technologies such as **IndexedDB** and **Capacitor.js**.
- Implemented mapping and **location-based functionality** using **Mapbox**, **React Leaflet**, and **Neshan**, alongside data visualization features using **ApexCharts** and **Recharts**.
- Improved frontend performance through **code splitting**, **lazy loading**, **bundle optimization**, rendering optimization, and performance analysis, while working with **Vite** and **Webpack** across different project architectures.
- Established and maintained frontend testing practices using **Jest** and **React Testing Library**, reviewing critical business logic and components to reduce regressions and improve release confidence.
- Conducted **code reviews**, **PR reviews**, mentoring, and technical guidance for team members, helping improve engineering standards, consistency, and maintainability across the frontend codebase.
- Led and participated in technical meetings with backend engineers, designers, product stakeholders, and clients, translating business requirements into practical technical solutions and implementation plans.
- Worked across a diverse portfolio of products including booking platforms, super apps, admin panels, CMS platforms, dashboards, offline-first applications, mapping systems, and real-time applications.
- Apply frontend testing practices using Jest for critical components and business logic to improve code reliability and reduce regressions.

Jan 2022 - Feb 2023 — Iran, Tehran

Front-End Developer

Freelancer

Design and implementation of admin panel front-ends for internal organizations, emphasizing the creation of responsive user interfaces, enhancing user experience, and integration with backend systems.

Education

2024 - Present — Iran, Tehran

M.Sc. in Artificial Intelligence

Islamic Azad University, South Tehran Branch — Tehran, Iran

2019 - 2023 — Iran, Tehran

B.Sc. in Electrical Engineering

Islamic Azad University, Science and Research Branch — Tehran, Iran

Project Overview

Mostazafan Foundation

Role: Frontend Developer
Stack: React, Redux, React Query, ant Design, SignalR

Key Features:
- Developed multiple modules for a large-scale employee welfare platform serving enterprise users.
- Built features for Hotel Reservation, Accommodation Management, Hotel Services, Shopping Cart, and Employee Dashboard (Kartabl).
- Developed responsive, user-friendly interfaces for complex business workflows while ensuring performance, usability, and maintainability.

ABFA Management Platform

Role: Frontend Developer
Stack: React , TypeScript , MUI , ApexCharts , GoJS , Axios , React Query

Key Features:
• Developed enterprise administration panels for managing water and wastewater services.
• Engineered a visual workflow designer similar to n8n, enabling users to create, configure, validate, and execute business workflows through an interactive drag-and-drop interface.
• Designed and implemented a customizable workflow engine with reusable nodes, ports, dynamic connections, and configurable business rules.
• Developed advanced graph editing capabilities, including drag-and-drop, grouping, copy/paste, undo/redo, keyboard shortcuts, context menus, zooming, and panning.
• Implemented node property editors, workflow validation rules, and business logic to support complex workflow configuration.
• Built JSON-based workflow serialization/deserialization for saving, loading, importing, and exporting workflow definitions.
• Developed reusable diagram components and graph utilities to support scalable feature development across the platform.
• Built operational dashboards and analytics using ApexCharts to visualize enterprise data and business metrics.
• Collaborated with backend engineers to integrate workflow execution APIs and synchronize workflow state with backend services.

Attendance Tracking SPA

Role: Frontend Developer
Stack: React, Redux, React Query, IndexedDB, QR Code Reader

A single-page offline-first application for managing student attendance with QR-based entry tracking.

Key Features:
• Developed an offline-first attendance management application with QR code-based student check-in.
• Implemented local data persistence using IndexedDB with automatic background synchronization.
• Enabled seamless offline functionality while maintaining data consistency after reconnection.

Parand Super App (SPA)

Modules: Food Ordering, Supermarket, Home Services
Stack: React, Redux Toolkit, React Router, Tailwind CSS, Zod, react-hook-form, Moment.js, ApexCharts

A modular super app offering multiple services in one unified SPA.

Highlights:
• Developed a modular super application combining multiple services into a unified user experience.
• Implemented restaurant ordering, supermarket shopping, and home service booking workflows.
• Built reusable UI components and centralized state management to improve scalability and maintainability.
• Designed responsive interfaces optimized for both desktop and mobile devices.

Tour Reservation Platform

Role: Frontend Developer
Stack: React, Redux Toolkit, Zod, react-hook-form, Axios

A tour booking platform enabling end-to-end reservations, hotel booking, vehicle rental and service ticketing.

Key Features:
• Developed a complete reservation workflow for tours, hotels, vehicle rentals, and travel services.
• Implemented multi-step booking flows, real-time capacity validation, and refund request management.
• Built responsive interfaces optimized for mobile-first booking experiences.

Custom Components & Tools

Reusable components developed for internal projects and admin dashboards:

- Headless Calendar & Dual Calendar: Fully customizable date pickers
- Gantt Charts (Month/Week View): Built with ApexCharts
- Form Builder (Drag & Drop): Dynamic forms using React DnD & Zod
- Rich Text Editor: Custom Slate.js WYSIWYG editor
- Interactive Whiteboard: Real-time collaborative canvas using React-Konva & WebSocket

Admin Panel & CMS Toolkit

Built reusable admin interfaces for multi-purpose dashboards:

- User & Role Management: Full CRUD + RBAC
- CMS: Rich text editing, media uploads, versioning
- E-commerce Module: Product & order management
- Analytics Dashboard: Interactive data visualization with filters
